

WHAT IS CLAIMED IS:

1. A massage brush comprising:

a massage structure having a U-shaped fastening portion arranged circularly inwards and made integrally in one piece;

5 an orientation ring engaging tightly with the massage structure;

a circular pad including a flange disposed therearound and an L-shaped restriction portion extending downwardly from a bottom of the circular pad, wherein the flange clamps in the U-shaped fastening portion of the massage structure for the circular pad to be received therein, and the L-shaped restriction portion is formed by drawing back

10 a predetermined distance from the flange to support the orientation ring thereon; and

an exterior cover retained against the orientation ring and the L-shaped restriction portion simultaneously to secure the massage structure to the exterior cover;

whereby the orientation ring engages with the massage structure, the L-shaped restriction portion, and the exterior cover simultaneously for tightly clamping the
15 massage structure.

2. The massage brush claimed as claim 1, wherein the orientation ring, the circular pad and the exterior cover are made of PP (polypropylene) or PVC (polyvinyl chloride).

3. The massage brush claimed as claim 1, wherein the orientation ring has a clamping
20 portion circularly protruding from an outer circumstance thereof, the exterior cover has a clamping groove formed therein and relating to the clamping portion of the orientation ring, so that the orientation ring engages tightly with the exterior cover.

4. The massage brush claimed as claim 3, wherein the clamping portion shrinks from a top to a bottom thereof, and includes a smooth surface for easy assembly.

5. The massage brush claimed as claim 1, wherein the orientation ring includes a restriction surface formed and protruding from an inner top thereof to engage with the U-shaped fastening portion.

6. The massage brush claimed as claim 1, wherein the exterior cover further includes
5 a step portion arranged on an inner side thereof for retention against the L-shaped restriction portion.

7. The massage brush claimed as claim 1, wherein the exterior cover includes a long handle for manipulating.

8. The massage brush claimed as claim 1, wherein the exterior cover includes a pinch
10 portion extending from a top thereof, the pinch portion has a curve body and a head connecting the curve body, the head being bigger than the curve body, and a user clamps the curve body with fingers and retains the head by a back of a hand.

9. The massage brush claimed as claim 8, wherein the pinch portion is disposed on an end of the top of the exterior cover, and the head has a retention member extending
15 forward from an opposite end thereof, whereby the user clamps the curve body in the fingers and retains the head and the retention member by the back of the hand.
